

Hazard communication has just got even simpler

Introducing SDS Professional.... a totally integrated IT Solution from the Environmental Health & Safety experts.

Safeware Quasar Limited, suppliers of Environmental Health and Safety (EH&S) solutions to the chemical industry announce the launch of a **totally new, integrated SDS system - SDS Professional.**

SDS Professional is based on Safeware's 15 years extensive experience of serving the chemical industry in the field of Hazard Communication and builds on a reputation for delivering stable, robust applications to meet the requirements of the most demanding regulations. **SDS Professional** simplifies hazard communication with its industry standard expert modules, unrivalled levels of accuracy and advanced functionality to make regulatory compliance simple and cost-effective - opening doors for new and emerging markets.

Advanced Features

SDS Professional utilises a series of integrated expert modules, dynamic report outputs, language variants and advanced distribution options in one intuitive package. Accurate EU Supply and Transport Classification modules form the heart of this solution -

guaranteed to produce the right results. Combined with Safeware's unique Compliance Pack (European Reference Database) of country/market specific information, it is soon apparent why SDS Professional is the long term EHS solution. The advanced editing tools

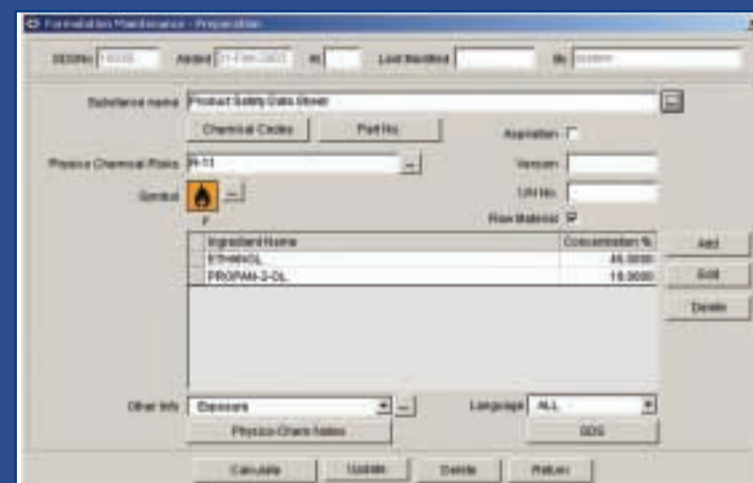

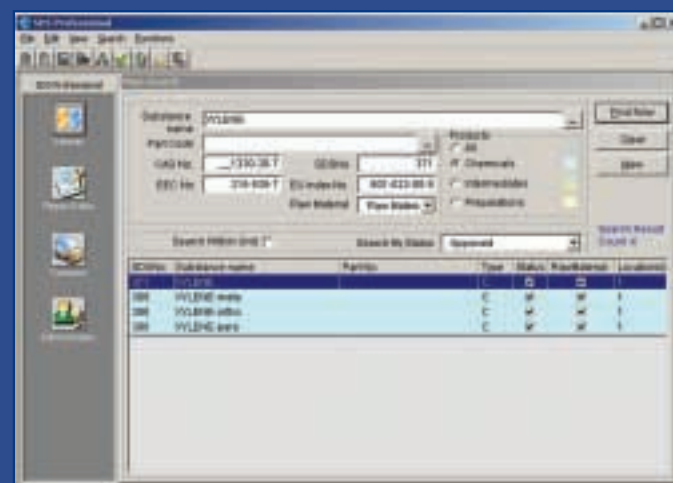

within the authoring system enable rapid creation and maintenance of your Safety Data Sheets, Labels, Transport Emergency Cards, Dangerous Goods Notes or user-defined reports.

Quality IT Solutions

SDS Professional is developed in accordance with stringent ISO quality standards using the latest software development techniques to provide a true 32 bit application, which fulfils today's demanding IT requirements. The flexibility of the system enables SDS Professional to be configured and integrated within an organisation's IT infrastructure and operational requirements. The system can be

implemented in a single user environment or a multi-user, multi-site installation working efficiently over a Local or Wide Area Network. Advanced security options allow controlled access to important information based on user definable privileges, access rights and location. Flexibility, security, accuracy, stability and compatibility form the basis of SDS Professional.

- Accurate expert modules.
- Flexible reporting options.
- Support for Character based languages.
- System integration with ERP systems.
- Single or multi-user support. (standalone vs LAN vs WAN)

Expert Systems

The Safemix EU Classification module was originally introduced to coincide with the launch of the harmonised EU regulations in 1993. Since then it has grown from strength to strength proving to be the most advanced and accurate classification module in the market, winning praise from experts and users alike. Its unique ability to store the most complex formulations, calculate to a high degree of accuracy, gives users the confidence and ultimate trust in the results produced. Safeware have provided consistent and reliable updates to meet regulatory demands with the minimum of effort, ensuring customers are compliant within regulatory time frames. Our regulatory experts have applied their knowledge to introduce the first true transport classification module to a level of detail and accuracy not previously thought achievable.

Document Authoring

SDS Professional is pre-configured with standard reports including the Safety Data Sheets, Dangerous Goods Notes and Transport Emergency Cards. Flexible reporting options and user definable reports facilitate the production of multi-lingual documentation including technical or specification data sheets. Advanced editing functions enable users to complete highly formatted, regulatory compliant documentation in minutes. A customisable document approval mechanism ensures only authorised information can be viewed or issued. SDS Professional uses audited phrase libraries ensuring accuracy in translation - for a professional result.

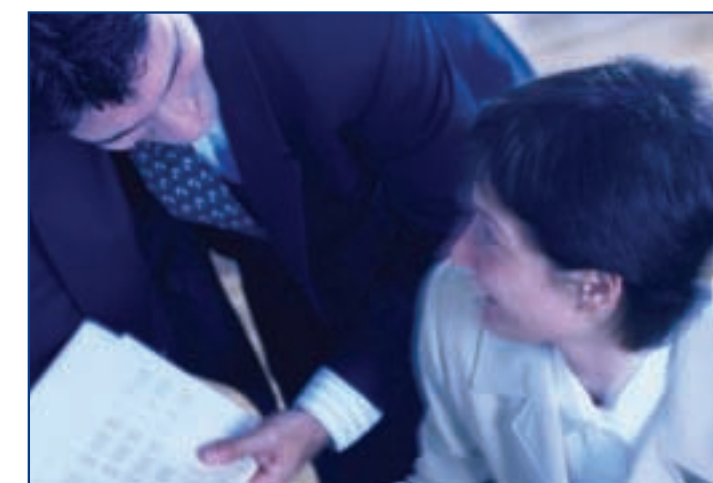

Distribution

Safeware can supply a wide range of distribution options to integrate with the needs of your business. The demand for exchanging data in electronic format has increased, facilitated by the popularity of email and the World Wide Web. SDS Professional contains outputs in all popular formats including PDF, HTML and MS Word® to enable electronic data exchange. The distribution of SDSs can be automated when linked to an ERP system providing fax, email, print, CD and the WEB using Safeware's dedicated SDS web server.

Consultancy & Support

Safeware Quasar prides itself on providing specialist consultancy and quality support in all aspects of logistics and distribution of dangerous goods. Our technical team of experts provides a cost effective, high quality service tailored to meet your exact business requirements. Our ongoing support and maintenance program ensures clients are updated in line with regulatory changes, while our worldwide network of consultants ensures comprehensive chemical compliance on a global scale.
